Average Job Involvement By Job Level (1-4)

The Job Involvement is Highest in the Job Role Type '4' followed by type '1' and '2'. The Job Involvement is alarmingly low for types '3' and '5' alike. Evidently, Type '4' Employees are the most Engaged ones.

% Job Satisfaction Rate by Distance From Home

Employees who reside in around 20Km periphery from the office seem to be the most satisfied with regards to their job as the percentage Job Satisfaction is observed to be the highest in them (Nearly 76%). On the Flip side, Employees living about 13Km far from the office appear least satisfied. Its worth observing how this curve reacts randomly with the given values because it exhibits a rather unconventional trend which is hard to predict, due to its anomalous attributes.

Average Monthly Income By Employee Age

The Average Monthly Income increases irregularly with a few frequent dips till the age of 55 where the Maxima is attained (roughly 2.48L). Beyond the 55 years mark, we see a sharp overall descend in the average monthly salary. Age 58 is a rather interesting point where the value abruptly rises up again to roughy 2.01L but then starts to fluctuate thereafter.

### Q.4 Average Job Satisfaction by Department

The Average Job Satisfaction share of each department is surprisingly comparable. There is a marginal difference. It appears that the sales department is slightly more satisfied than the remaining two. Comparitively, the least satisfied amongst the three is the Human Resource. However, conclusively all the three deparments are more or less equally satisfied with their work/job.

### Q5. Average Monthly Income (Lacs) by Education Field

The Employees holding education in the fields of Marketing, HR, and Medical constitute the top 3 by Average Monthly Salary. The Marketing Employees receive an average monthly payout of roughly 1.38Lakhs (Highest) while the Technical Degree holders make about 1.08Lakhs Per Month (Lowest). Clearly, there is a Direct Relationship between the type of education attained and the monthly compensation salary.

[Q6. Average of Environment Satisfaction by Gender](#) [Q7. Average of Job Involvement by Gender](#)

Both the Genders stand pretty close when it comes to Environment Satisfaction and Job Involvement. Despite being nearly equal, its worth noting that Men, as per the data, are slightly more satisfied with their environment than women and their involvement in their job is also faintly higher. The difference doest appear to be much, however, for practical applications and HR decisions point of view.

### Q.8 % Satisfaction Rate by JobRole

This Visual uses a Satisfaction Rate Measure instead of Average Job Satisfaction as Satisfaction Rate Measure is a more lucid metric for this comparison. The Healthcare Representatives are highly satisfied with their jobs while the HR employees seem to have some trouble getting acclimated to thier jobs.

*Working of this Measure: This Measure counts the total rows in which the Job Satisfaction is higher than 2 (on a scale of 4), and divides it by the total number of employees. (As %)*

Average of Job Satisfaction by Years Since Last Promotion

Average of Job Satisfaction by Years At Company

The average job satisfaction dips drastically after the 4th year since promotion from 2.92 to 2.44. This constitutes the second minima. the first minima is observed 14 years since promotion where it drops considerably; from 2.7 to 2.2, beyond which it gradually starts increasing fortunately. Heavy Fluctuations can be noticed while comparing Average job satisfaction with Years at Company. For the very first time, the curve can be seen hitting the maximum job satisfaction value of 4 at 40 years mark.

Average of Job Involvement by Years With Current Manager

As per the curve, employees who have spent nearly 11 years with the same manager reportedly possess the lowest average job involvement rate of 2.36 out of 4, while employees with 13 years of experience with the same manager reported the highest average job involvement of 3.07. Such a significant jump in average job involvement rate just by incrementing the years by 2 units is quite surprising.
